2. Citations and explanations

JP 2001-12527 A discloses a fluid damper comprising a first subsystem of cylinder and piston and a second subsystem of cylinder and piston, the first and second pistons being joined by a piston connector encircled by the second cylinder, so as to move concurrently along a common coaxial axis. The use of fluid dampers in vibration isolating mounts is well known. Therefore, inventions of claims 1,2,3,5,15,19,20,22,29,33,34,39,43 lack novelty.

JP 2001-12527 A also discloses the first and second subsystems each defining a chamber that are in fluid communication with one another, with an intermediate chamber between the two. Inventions of claims 6,7,8,23 therefore lack novelty.

The chambers described in JP 2001-12527 A are maintained at a determined pressure. Therefore, inventions of claims 10,25,44 also lack novelty.

JP 9-15307 Y1 discloses a fluid damper comprising a first subsystem of cylinder and piston and a second subsystem of cylinder and piston, wherein the first and second pistons move concurrently along a common coaxial axis, the second subsystem being stacked directly on top of the first subsystem. Therefore, inventions of claims 11,12,26,35 lack novelty.

JP 9-15307 Y1 also mentions stacking larger numbers of subsystems for larger loads. A person skilled in the art has no difficulty in combining this disclosure with that of JP 2001-12527 A, to increase the number of subsystems to three. Therefore, inventions of claims 13,14,27,28,37,38 lack inventive step.

US 5931441 A discloses a vibration isolating mount for an exposure apparatus used in processing semiconductor wafers, comprising an actuator and a fluid damper stacked on top of the actuator, the pistons of the actuator and damper being joined by a piston connector that extends around the upper cylinder, so as to move concurrently along a common coaxial axis. A person skilled in the art has no difficulty in combining this disclosure with that of JP 2001-12527 A, to provide a piston connector extending around the second cylinder, and to use the fluid damper of JP 2001-12527 A in an exposure apparatus for processing semiconductor wafers. Therefore, inventions of claims 4,16,17,18,21,30,31,32,40,41,42 lack inventive step.

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: **Box V.**

None of the documents cited in the international search report makes mention of adjusting the pressure in the intermediate chamber to be below atmospheric pressure, or of controlling the pressure of each subsystem.

Inventions of claims 1 through 45 all have industrial applicability.
